BEST WORK

Furniro

A Full Stack Furniture Marketplace

https://furniro-abd.vercel.app/

Journey

Furniro is a furniture e-commerce platform I'm developing to solve issues like poor quality, slow delivery, and frustrating online experiences. By offering curated collections, eco-friendly options, and advanced AI features, Furniro aims to provide a seamless shopping experience. My journey as a front-end developer, combined with my passion for innovation, has shaped this project. With a tech-driven approach using Next.js and Sanity CMS, I'm working to create a platform that's not only user-friendly but also scalable for global expansion.
